CSC Commentary

Performance is within target, and this month there has been further reduction in the number of contacts going onto referrals. However this needs to continue to be closely monitored.

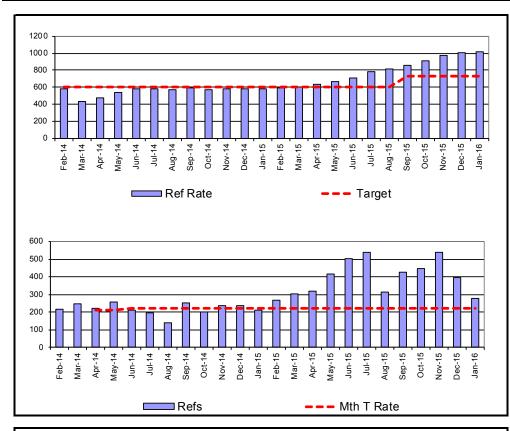

Definition

The table shows the number of referrals and contacts happening in each given month. The %Mnth column shows in that month alone, the crude conversion of contacts that went onto referrals. The %YTD column shows the year to date percentage of contacts going on to referrals.

CSC Commentary

Our referral rate is higher than our regional colleagues and this requires further investigation. The number of contacts moved through to referrals is reflected in this performance target. It is clear in the monthly report that the number of referrals being progressed is decreasing which is due to the direct impact of the extra scrutiny provided by the second Advanced Practitioner in MASH. This has meant that more contacts have been closed/diverted rather than progressing into referrals.

Definition

Number of referrals (rolling 12 months) divided by the population of 0-17 year olds in Peterborough multiplied by 10,000

CSC Commentary

Conversions to assessments have increased this month. This is now in Amber and moving closer to the 75% target set. The additional capacity of an Advanced Practitioner is now in place to support the initial screening decisions and this is ensuring a more robust application of threshold.

Definition

2,546

YTD:

The percentage of children referred to children's social services departments whose cases go on to single assessments. The numerator is the number of single assessments started in the period recorded on ICMS. The denominator is the number of referrals in the period recorded on ICMS.

CSC Commentary

The number of Early Help Assessments completed in November, December and January remains consistenly high. Demand for eCAF training from partners is currently exceeding supply and this is something we are addressing. Access to the two Behavour Panels and 0-5 Early Support Pathway are now insisting upon a completed Early Help Assessment and this is having a positive impact, with some partners previously hesitant to complete EHA's now engaging including a number of health colleagues.

Definition

The rate is the number of new EHAs recorded in the previous 12 months divided by the population of 0-17 year olds in Peterborough multiplied by 10,000. The number of EHAs is taken from the local EHA tracker database and is not externally valid.

CSC Commentary

Significant improvement has continued in terms of assessments being completed within 45 days and whilst the year to date figure is still slightly short of the 95% target, it is on a clear upward trajectory and now sits at 90.1%

The in-month performance in January has maintained the improvement made last month and is exceeding the target with 98.3% of single assessments completed within 45 days. The RAG rating is now amber as the year to date performance is still below 95% target. It is hoped that with continued good performance that this will be met by the end of the year.

CSC Commentary

There has been a further increase in the re-referral rate this month. This has been on an upward trajectory. A dip sample audit completed by the Quality Assurance Team to assist our understanding of the issue, has taken place. This audit highlighted that more work needs to be completed at the contact stage to avoid unnecessary progression into a referral. It identified that the quality of some assessments needs to be improved. the audit also indicated that there may be a need to look at capcity and responsiveness within Early Help. This will be explored further in February.

CSC Commentary

The continuing reduction of children subject to a Child Protection plan is showing good performance, reflecting an improving position in regards to our statical neighbour authorities average. The oversight of managers to test the threshold of whether a CP plan is required as opposed to moving to either a Child In Need plan, that supports challenge and management of risk

Definition

Number of children with a current child protection plan divided by the population of 0-17 year olds in Peterborough multiplied by 10,000. The number of children is taken as a snapshot count at the end of each month

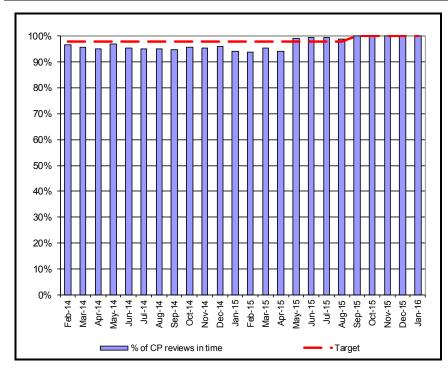

Population for denominator: 46600

Target Variance RAG

CSC Commentary

The steady increase in the level of visiting over recent months has begun to improve again as recording of visits in a more timely way is making a difference. There is an expectation that this figure will continue to rise as numbers of children subject to a CP Plan reduces and caseloads for social workers also reduces and recording of visits in a timely manner improves which has been evident this month.

Definition

Of all children subject to a child protection plan for more than 4 weeks, the number and percentage of visits that were done within the 4 week deadline.

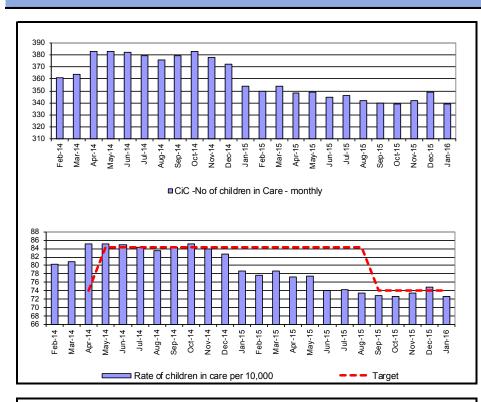

This is snapshot data taken at the month end.

CSC Commentary

Reviews for Children in Care have all been held within timescale since April 2015, last calendar years percentage captures one child who's review was held out of timescale at the end of January 2015. However, this has now moved out of the 'capture period' and reviews are back to being at 100% and are green rag rated.

Definition

The percentage of Looked after children for at least one month, whose case was reviewed within the required timescales.

The denominator is children who are LAC for at least one month at the end of the reporting month. The numerator is the number of children who have not had a review in the last 12 months recorded as outside of timescale.

CSC Commentary

While this rag rating remains as red, the number of statutory visits for January 2016 has continued the recent upward trend and has increased to 88.6%. Work continues within the teams as this remains as an area for improvement and completing and recording visits is being addressed by Team Managers.

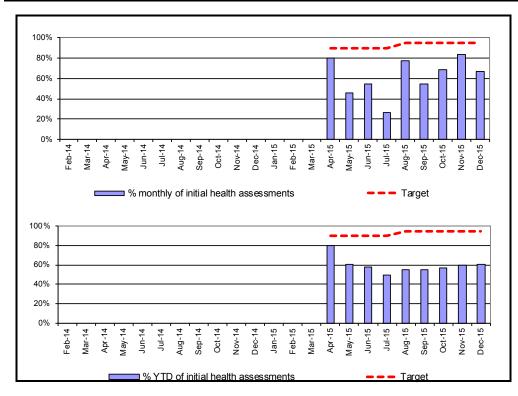

Definition

Of all Children in Care that have been looked after for more than 6 weeks, the number and percentage of visits that were completed within the 6 week deadline (or within three months for those Children in Care that have been looked after for more than 12 months and whose placement is deemed to be permanent). This is snapshot data taken at the month end.

CSC Commentary

The current performance system struggles to capature this indicator accurately. Unconfirmed data suggests that around 88% of the assessments were completed in timescale in Decxember 2015, and it is confirmed that 100% of assessments were completed in timescale in November; this is a much improved picture compared with last year, but remains an area where scrutiny is required

Definition

73

121

YTD:

The number of children becoming looked after that have an initial health assessment recorded within 20 working days of the child entering care. The number of children is measured one month in arrears to enable time for the 20 day period to elapse and excludes cases where the episode of care was closed within 20 days and also children entering care because they have been placed on remand (because the remand institution is responsible for completing the initial health assessment).

CSC Commentary

Chart 16

While this indicator has risen by 10% this month, this remains an an area of significant focus as performance has historically been poor and it is still rag rated red. However, the number of dental checks for CIC (aged 3- 7 years) held within previous 12 months is now 77.1%.

Definition

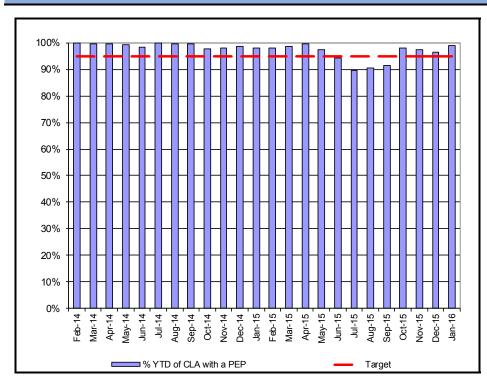

The percenatge of children looked after who have had a dental check within the previous 12 months.

Children looked after aged between 3 and 17 years old that have a dental check recorded on Liquidlogic that was completed within the previous 12 months. The denominator is the number of children

CSC Commentary

Six NIC were identified as not having had a PEP meeting in January. Of these six, one has now taken place, four have been arranged and are within the twenty day time scale. Discussions around education for the remaining one have taken place with the SEND team and the social worker and will be recorded as an initial PEP. Social workers are now required to complete PEPS using the ePEP system and record on Liquid Logic. Some PEP review meetings have taken place but not recorded on LL. The monthly PEP list provided by the Performance Management team is checked by PVS and forwarded to CSC team managers for follow up with social workers.

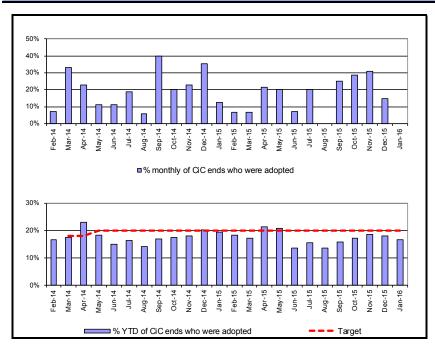

Definition

The denominator is the number of children in care who are of school age. The numerator is of those children, the number that have a PEP added to the system.

CSC Commentary

Quarterly data shows that the number of new decisions nationally has continued to fall from 1,830 in quarter 2, 2013 - 14 to 1,100 in quarter 4, 2014 – 15, representing a decrease in 40 %. In Peterborough the decrease has not been experienced previously however it appears that Peterborough has fallen in line with other areas, in this period as there were 8 decisions made compared with 21 in the same period in the previous year. This represents a decrease of 62 %. The numbers of proceedings has however remained steady and in line with other areas, it appears that other court orders are being made (for example SGO's) rather than placement and adoption orders.
