Number of contacts and % going on to referral

CSC	Commentary
-----	------------

Previous performance against this target has been variable, and the threshold guidance is now being applied more consistently in respect of all contacts. Activity this month has been slightly higher than the target, but is demonstrating the levelling out of performance over the last two months.

Definition

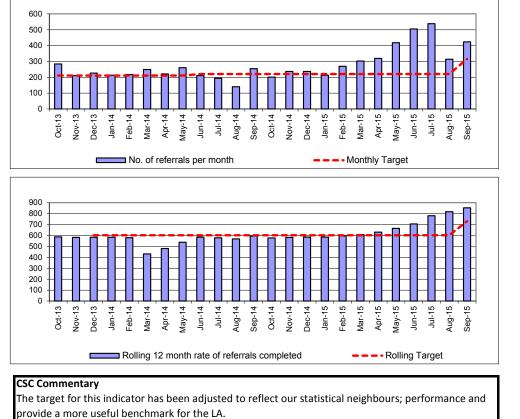

The table shows the number of referrals and contacts happening in each given month. The %Mnth column shows in that month alone, the crude conversion of contacts that went onto referrals. The %YTD column shows the year to date percentage of contacts going on to referrals.

A =+/- 10%

G =40%

R =+/- 20%

Number of Referrals per 10,000 - Rolling 12 Months Performance

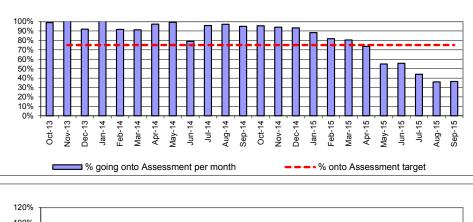

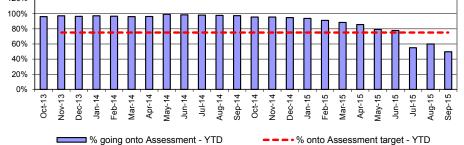

This indicator has fluctuated significantly over the last few months, partly due to changes in the MASH Hub. However, we remain above target currently. Work is being carried out by the Head of Service and Team Manager to ensure a consistent approach, and a multi-agency review of thresholds is underway by LSCB.

Referrals progressing to Single Assessment

CSC	Commentary
-----	------------

Performance has slipped this month in relation to the target. Conversion rates are affected by contact to referral decisions, and also whether it has been possible to obtain parental consent at an early stage. This does also indicate application of thresholds, but should be addressed earlier in the referral The Head of journey.

Service is working closely with Team Managers to address consistency issues, and would expect to see improved performances next month.

CSC Commentary

Numbers of assessments are always lower during school holidays and pick up from September. The rate in August and September this year is higher than in the same month a year ago, indicating the continuing strong use of Early Help Assessments in the City.

Definition

Number of new EHAs recorded in the month divided by the number of referrals that month (from Page 4). The rate is the number of new EHAs recorded in the previous 12 months divided by the population of 0-17 year olds in Peterborough multiplied by 10,000. The number of EHAs is taken from the local EHA tracker database and is not externally valid.

CSC Commentary

The target for this indication has been adjusted to 22% due to our strong performance in this area. This month's performance has seen a reduction on the previous month, although it is still above target. This will be monitored closely, as it is possible that more consistent application of thresholds may result in more repeat referrals.

Definition

Month Re-Refs

Refs

The percentage of referrals where a previous referral has occurred within the last 12 months. If a child has more than one re-referral in the year, each one will be counted.

Number of Children with a Child Protection Plan per 10,000

CSC Commentar

The number of children with a child protection plan is higher than the target set, there is ongoing threshold work and review of all children subject to a plan across services to ensure only the right children are on a plan.

CSC Commentary

Performance in this area is good. There is always a delay in the system catching up with conferneces held in the most recent month. This is because the confernece is not recorded by the system as having been held until the minutes are uploaded onto the system. This is corrected in the following month's performance report.

Definition

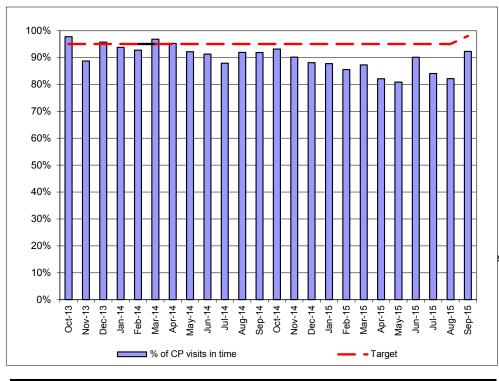

The percentage of children with a Child Protection Plan for at least the previous three months, reviewed within the required timescales.

CSC Commentary

There has been a steady increase in the level of visiting over recent months. The more significant increase in September coincides with the implementation of a more consistent approach by all team managers, who have set dates with social workers for bringing visiting to expected levels. It is now the expectation tat where any social worker is unavaibale to complete a visit, a colleague is asked to undertake the visit in their place. All team managers must now provide a written individual reason on a weekly basis as to why a child was not seen in time and a setting a date for the planned visit that week. There are a small number of children overseas (approx 2%) which accounts for some visits not taking place in timescales.

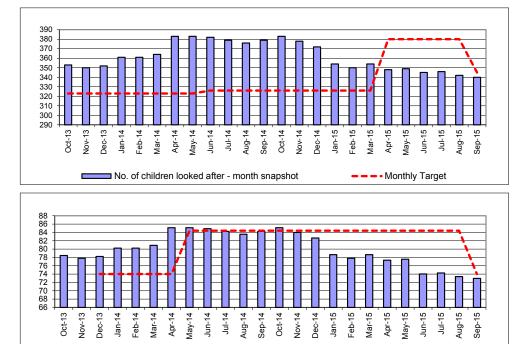

Definition

Of all children subject to a child protection plan for more than 4 weeks, the number and percentage of visits that were done within the 4 week deadline. This is snapshot data taken at the month end.

CSC Commentary

The performance of this indicator remains good and below the SN and ENG average. There has been a slight increase in the number and % of children who have experienced 3 or more moves in September. This will need monitoring to ensure the trend doesn't continue as there has been an incremental rise since May. Additional monitoring and challenge will be set up in the placement service to address this.

Definition

The percentage of children looked after at any given time with three or more placements during the last 12 months. All placements of 24 hours or more are counted. All placements regarded as temporary are included, except: • temporary periods on holiday or in hospital; • where a foster carer goes on holiday for 21 days or less and the child temporarily stays with another Population for denominator: 46600

CSC Commentary

97.6% visits completed in time. This exceeds the target of 95%. This demonstrates good performance over a 5 month period.

Definition

Of all Looked After Children that have been looked after for more than 6 weeks, the number and percentage of visits that were completed within the 6 week deadline (or within three months for those Looked After Children that have been looked after for more than 12 months and whose placement is deemed to be permanent).

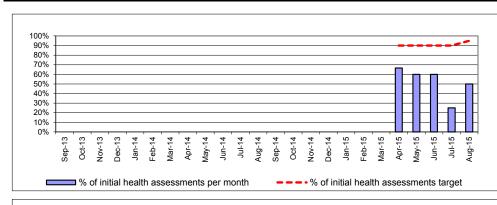

This is snapshot data taken at the month end.

CSC Commentary

Chart 12

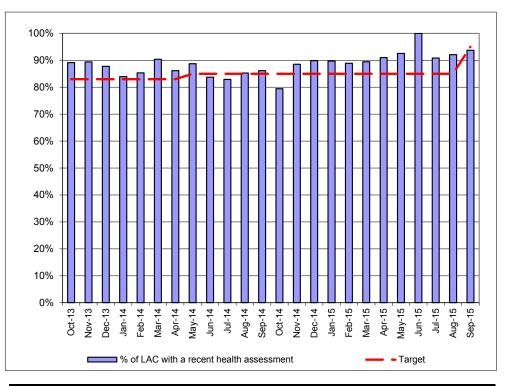

The data recording for this performance indicator is incorrect. Work is in progress to amend reporting systems. Recording information received from Access to Resources Team shows that 55% of Health Assessments completed within timescales. This is still too low and new Head of Service for Looked After Children is continuing to review how performance can be improved.

Definition

The number of children becoming looked after that have an initial health assessment recorded within 28 calendar days of the child becoming looked after. The number of children is measured one month in arrears to enable time for the 28 day period to elapse and excludes cases where the episode of care was closed within 28 days and also children becoming looked after because they have been placed on remand (because the name distribution is represented by the initial health assessment).

CSC Commentary

Performance has continued to improve during September 2015, with a constantly high number of health assessments completed (93.7%). This is way above the target of last month which was 85%. Therefore a more challenging target has been set at 95%. This is a stretched target and the service will work hard to achieve this.

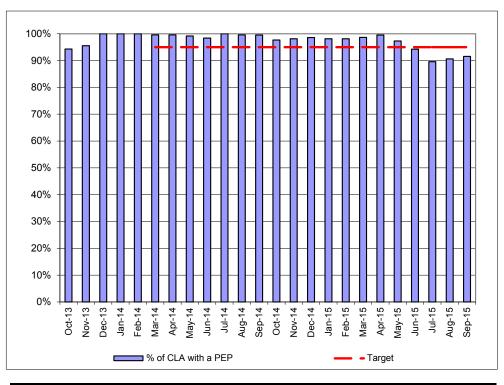

Definition

Of the children who had been in care for at least 12 months the proportion who had an annual health assessment during the previous 12 months.

CSC Commentary

A number of PEP meetings took place in June , July , August and September but were not recorded on Liquid Logic by Social Workers. Designated Teachers are not available in August so initial PEPs will not have been completed for CYP coming into care during the summer . There have been some delays in the completion of PEPs for UASC due to the requirement for age assessments and change in placements. Social Workers have been reminded that PEPs should be completed whether or not there is an education placement and that PEP meetings need to be recorded on LL . Updated guidance for Social Workers for this task has been requested from LL support .

Definition

The denominator is the number of children looked after who are of school age. The numerator is of those children, the number that have a PEP added to the system.
